

Pedestrian tracking

VUT FIT POVa

Lukáš Petrovič, Filip Šťastný, Martin Vondráček

2019-01-09

Task Inspiration

- Marauder's Map from Harry Potter
 - Magic parchment that reveals the current location of anyone on Hogwarts grounds

http://harrypotter.wikia.com/wiki/Marauder%27s_Map

Task definition

1. Multiple people walking in a scene
2. Multiple stationary cameras
 - ✓ Initial calibration
3. Individual path tracking

Human Detection in 2D

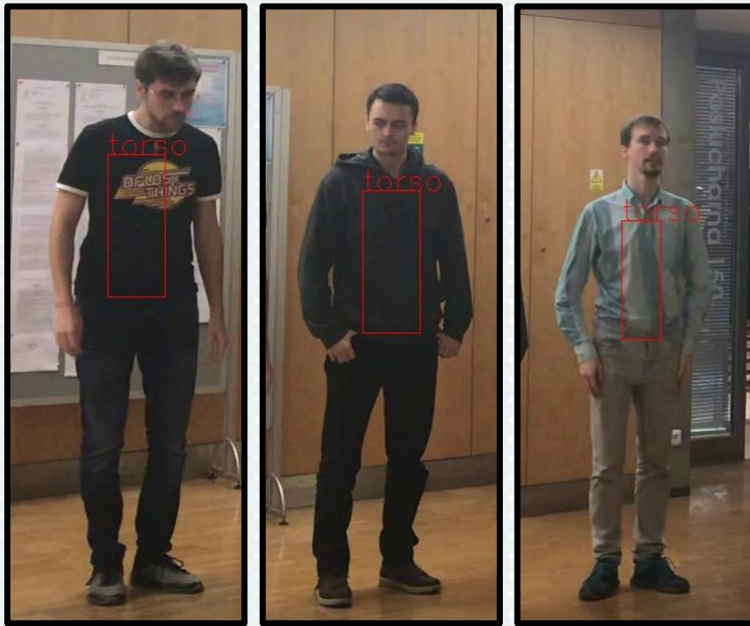

- *OpenPose* deep neural network
- Pretrained model with *COCO* dataset

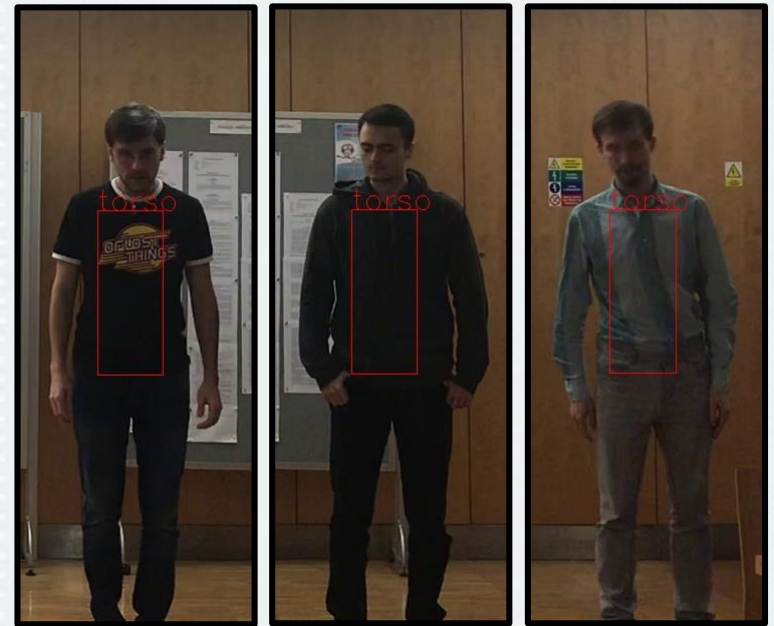

Multi-person key point detection

Person View Matching

Similar torso histograms \rightarrow same person

Side person views

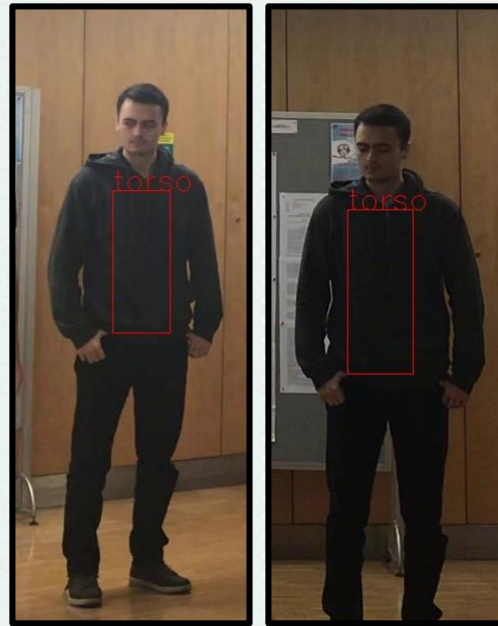

Front person views

Person View Matching

Similar torso histograms \rightarrow same person

PersonTimeFrame A

PersonTimeFrame B

PersonTimeFrame C

Triangulation

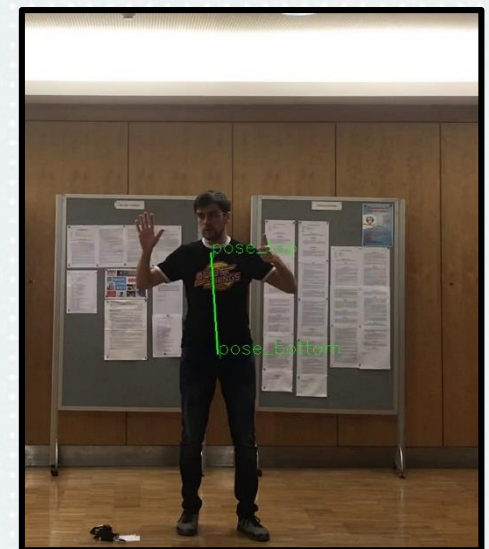

Average person's torso \rightarrow distance from camera

$y = 2$ m

$y = 3$ m

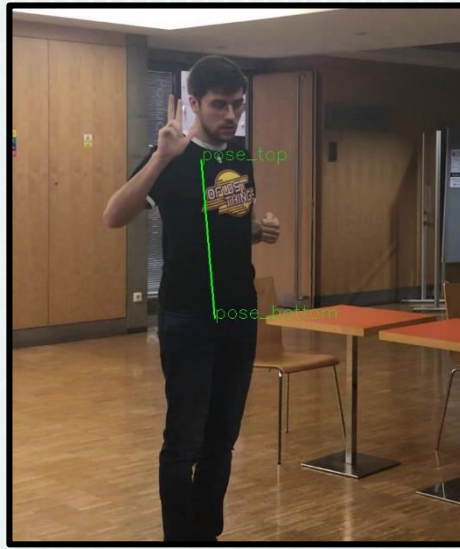

$y = 6$ m

Triangulation

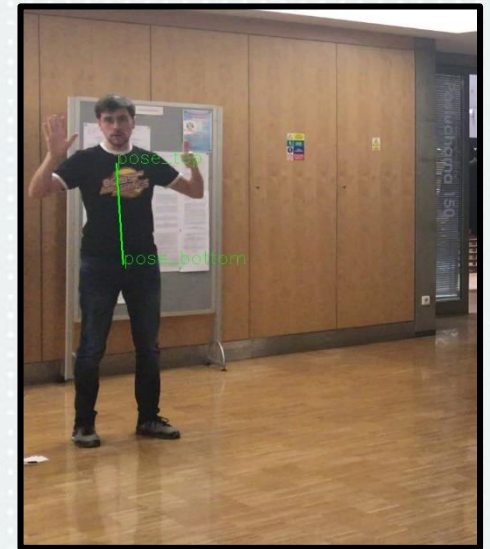

Average person's torso \rightarrow distance from camera

$y = 2 \text{ m}$

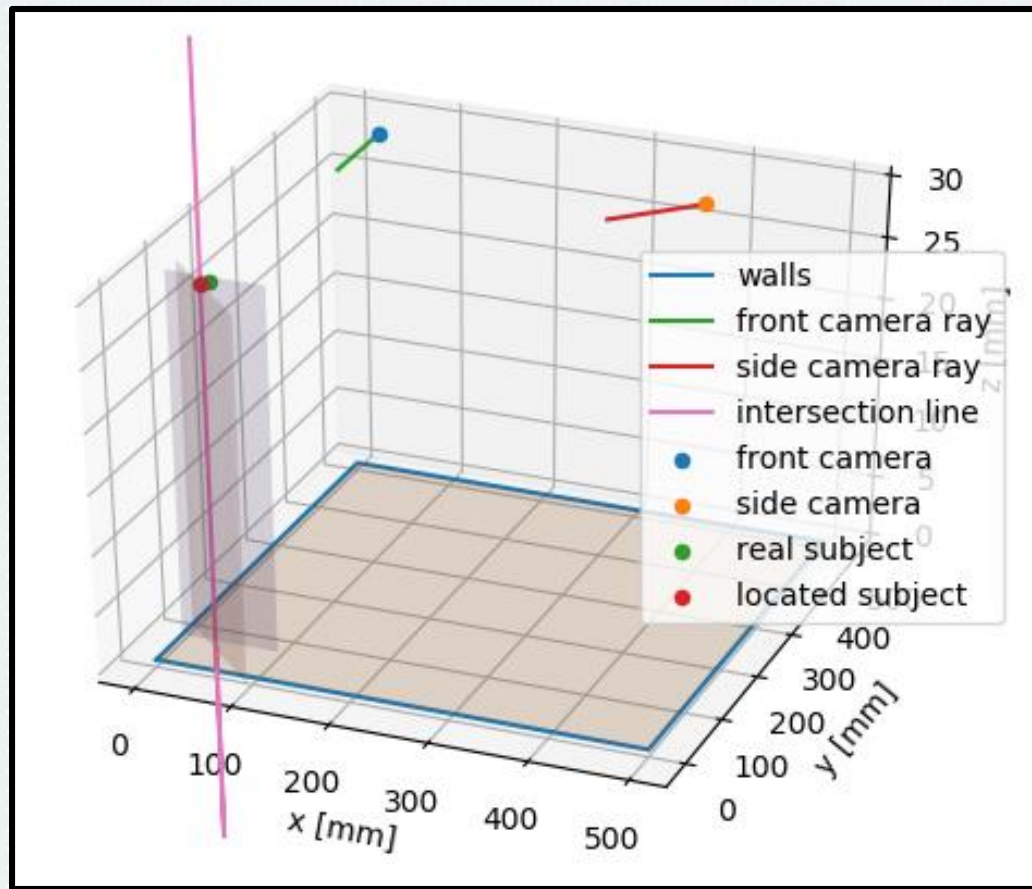

$y = 3 \text{ m}$

$y = 6 \text{ m}$

Triangulation

Intersection of distance planes \rightarrow person's position

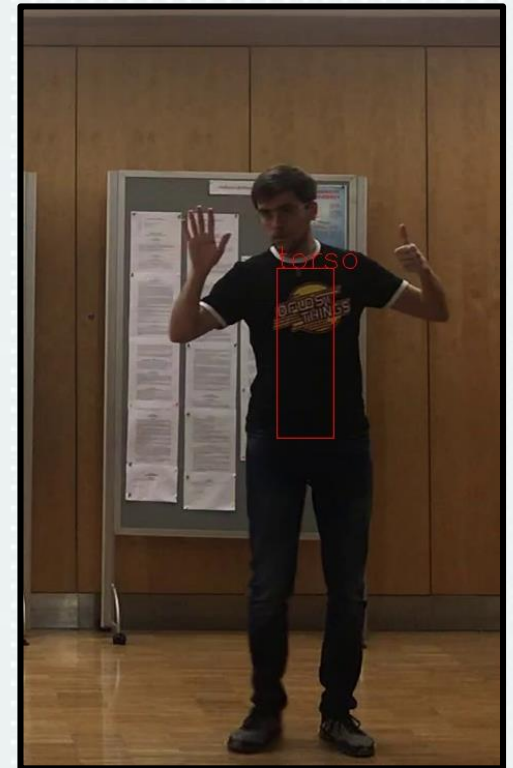

Person Tracking

Similar torso histograms *over time* → same person

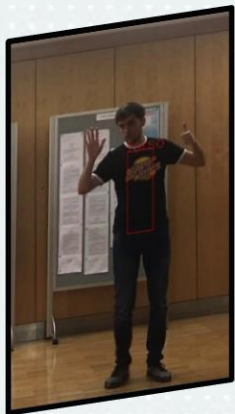

Person Tracking

Similar torso histograms *over time* → same person

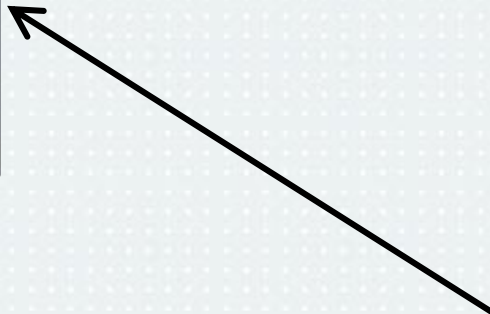

Person Tracking

Similar torso histograms *over time* → same person

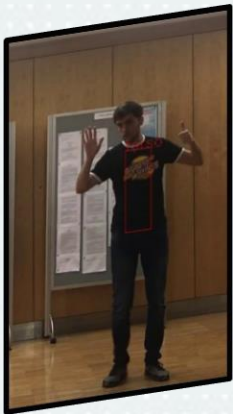

Person 1

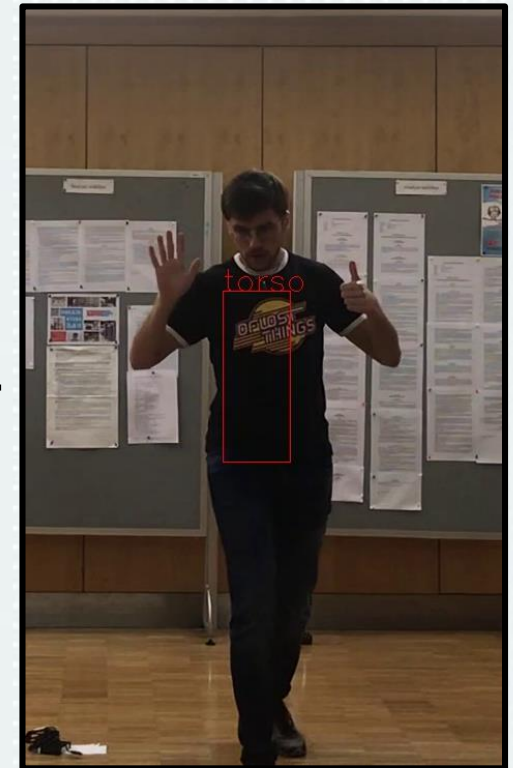

Person Tracking

Similar torso histograms *over time* → same person

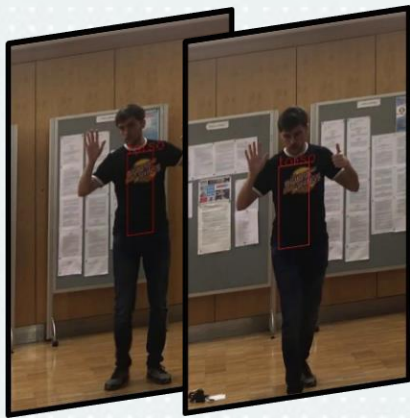

Person 1

Person Tracking

Similar torso histograms *over time* → same person

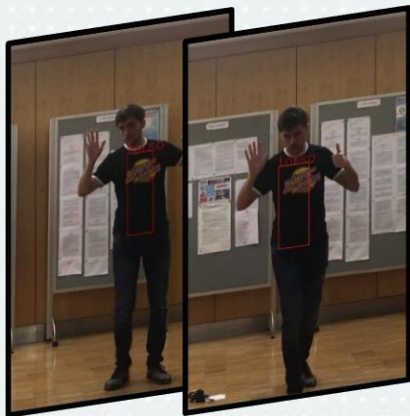

Person 1

*Known
person!*

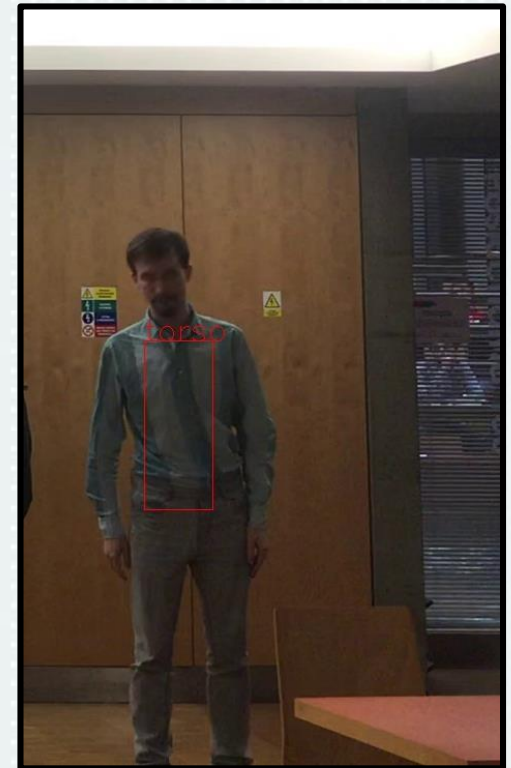

Person Tracking

Similar torso histograms *over time* → same person

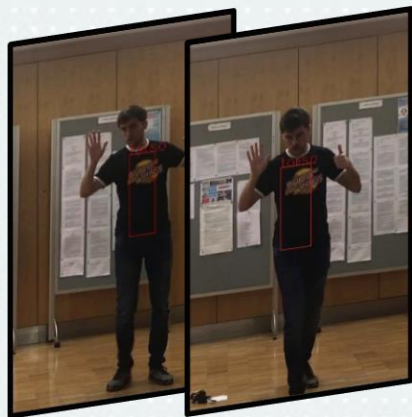

Person 1

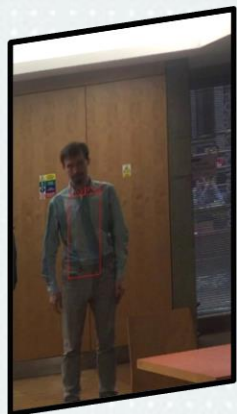

Person Tracking

Similar torso histograms *over time* → same person

Person 1

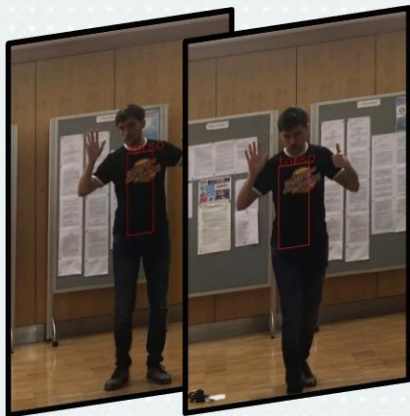

Person 2

*New
person!*

Person Tracking

Similar torso histograms *over time* → same person

Person 1

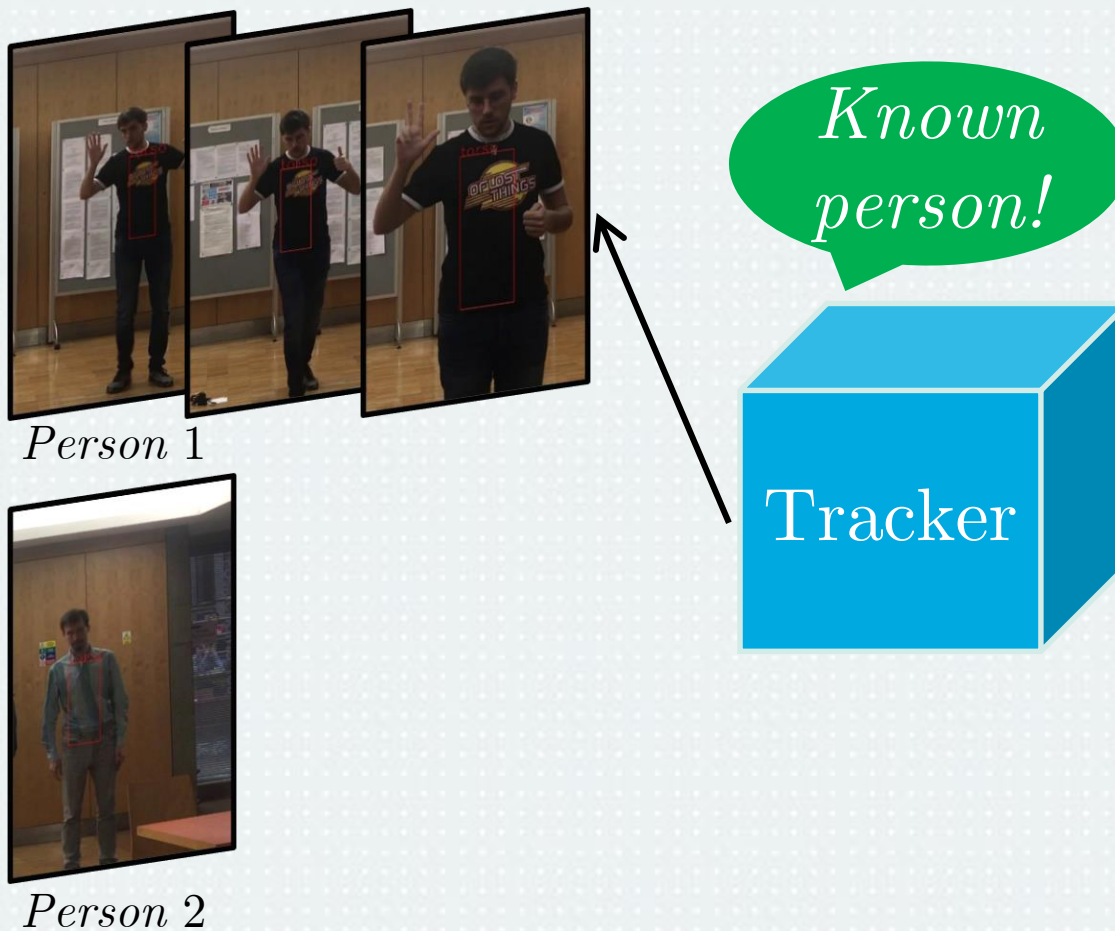

Person 2

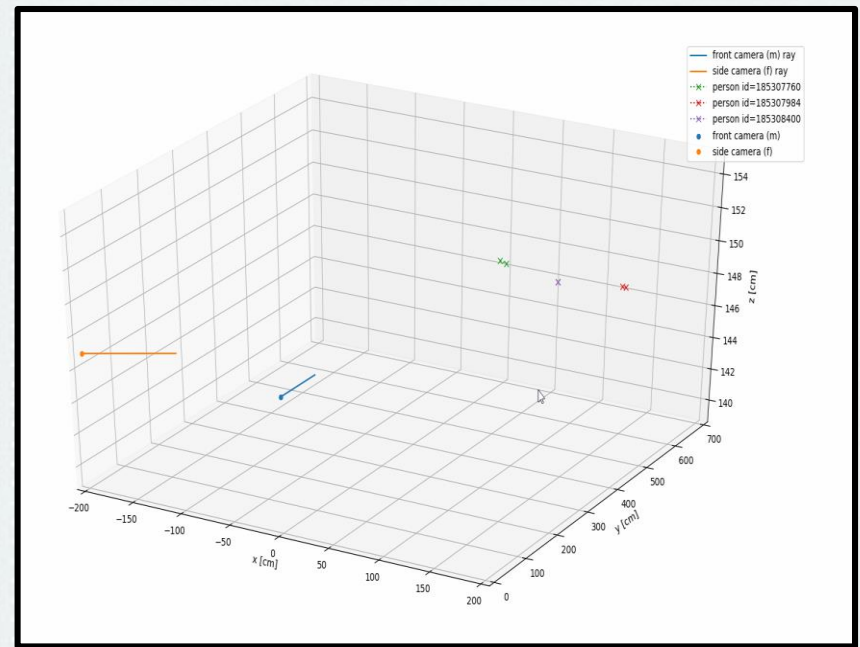

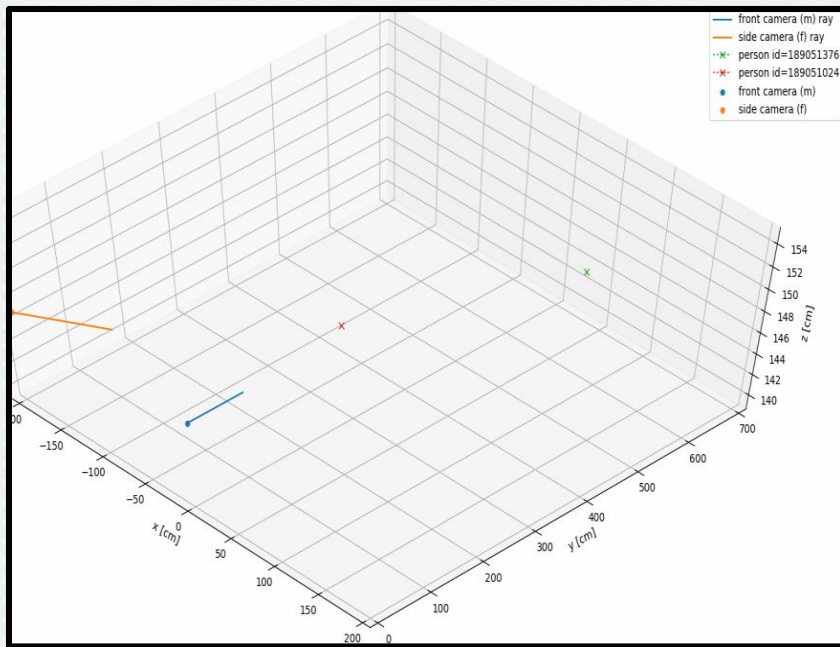

Person Tracking

Similar torso histograms *over time* → same person

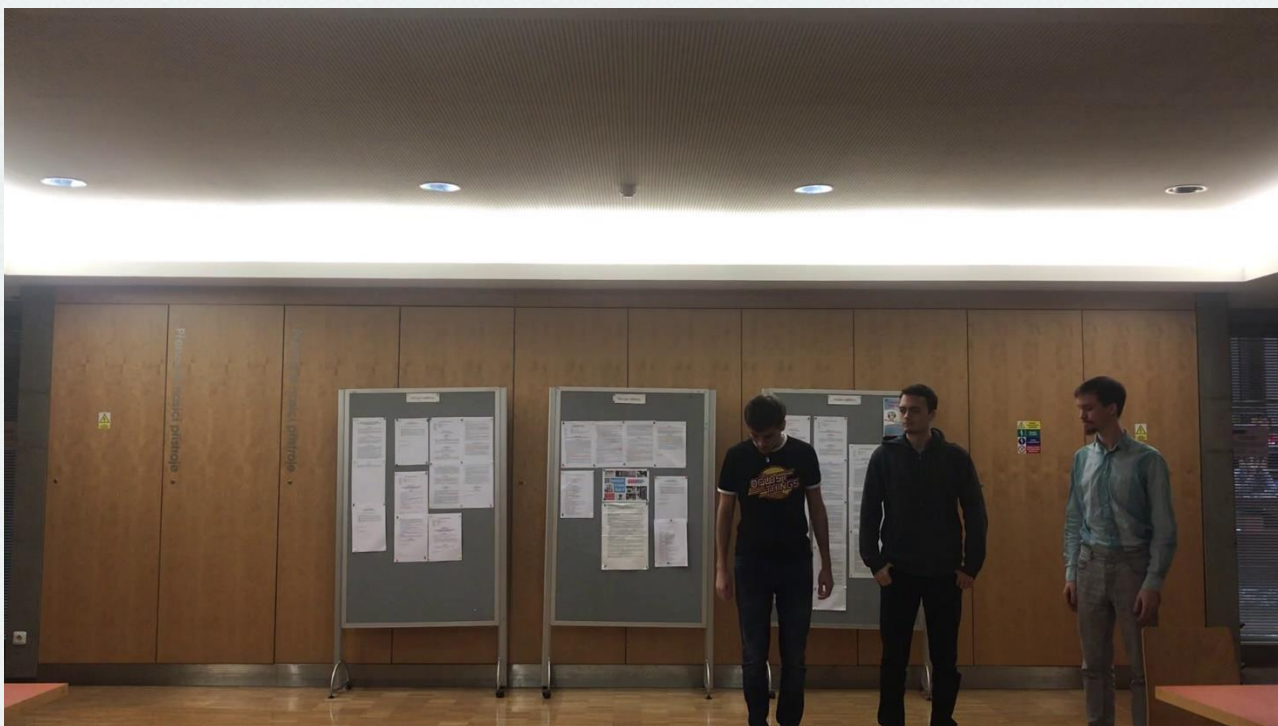

Visualisation

- Paths of all tracked people, positions of cameras
- Interactive 3D model

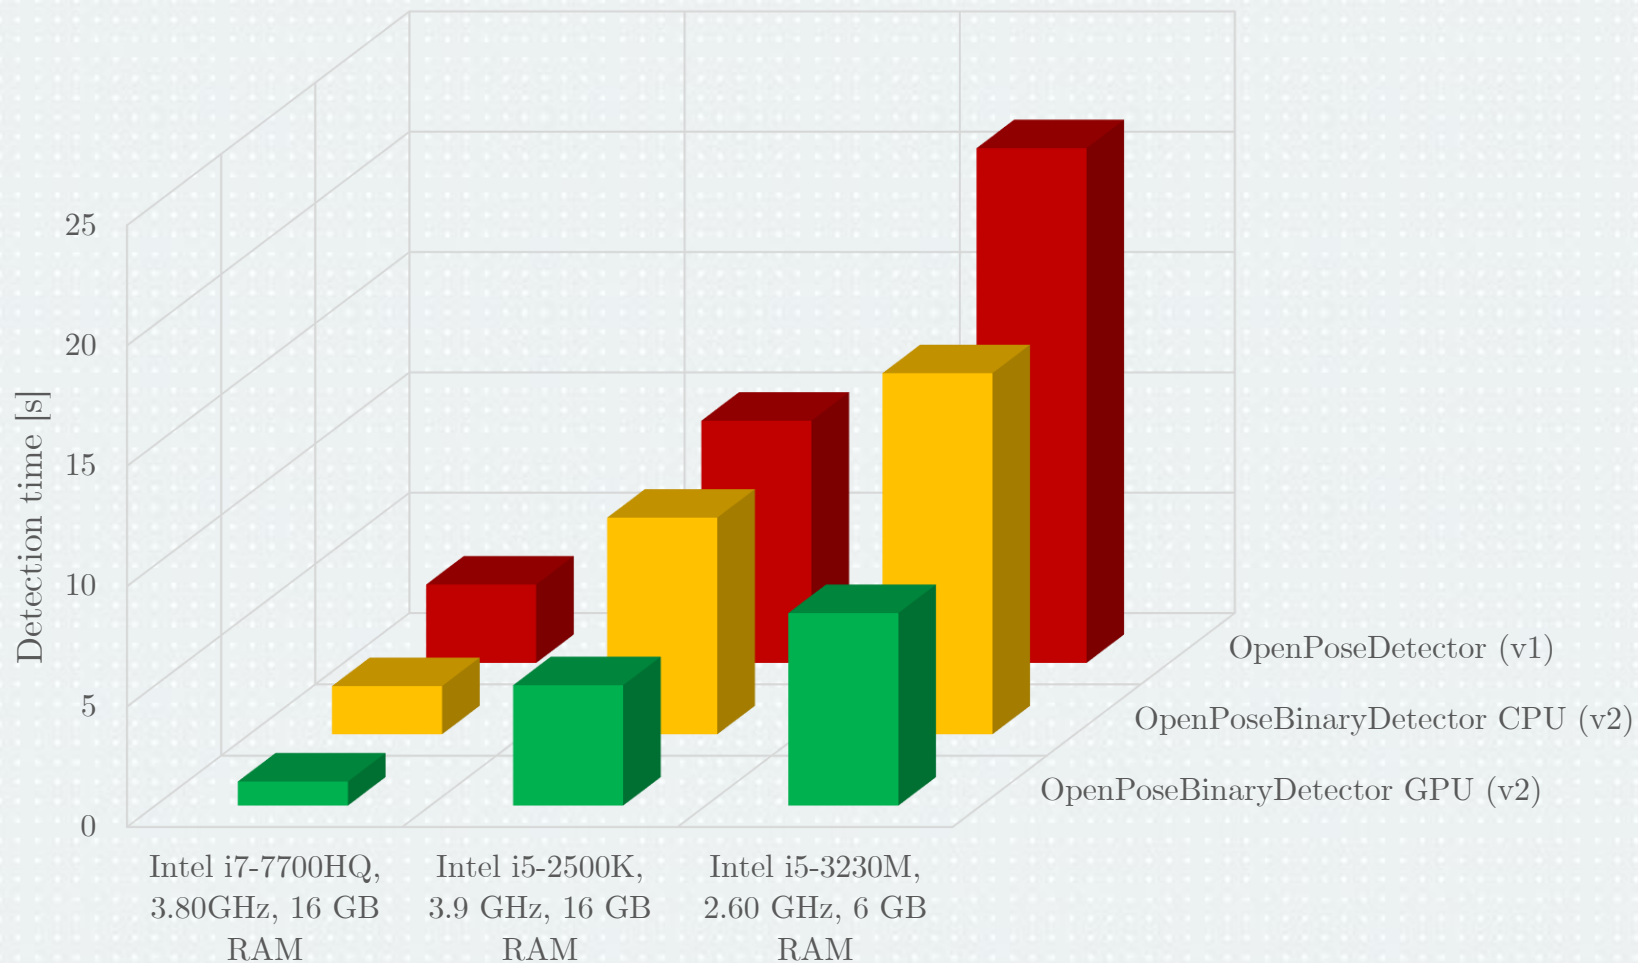

Testing Data

- Own images and videos
- *COCO* dataset for *OpenPose*

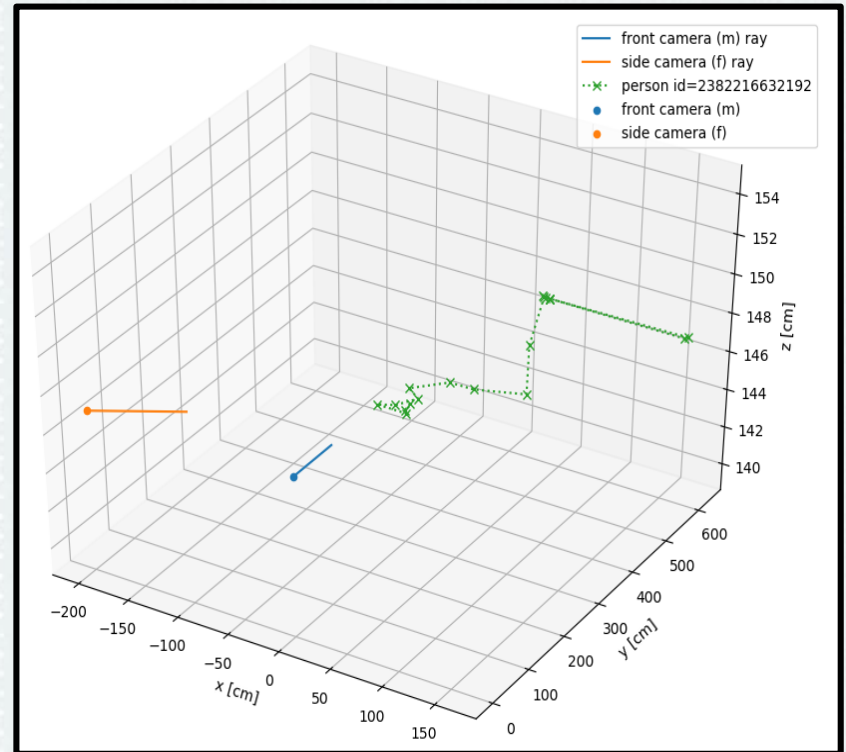

Evaluation

Human Detection Time

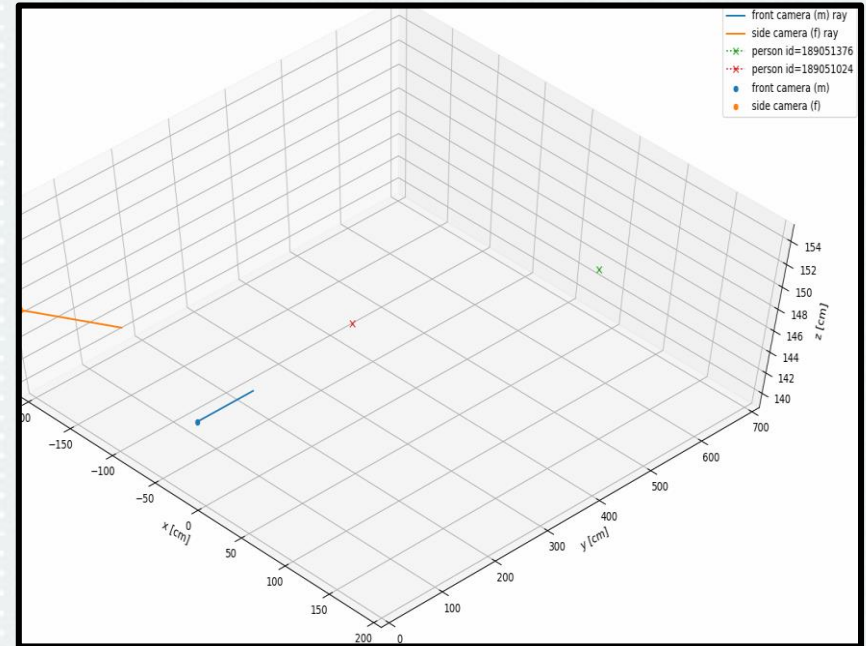

Evaluation

- **Matching**
- **Triangulation**
worst case less than 35 cm
error in 600 cm space.
- **Tracking**
Similarity threshold

Pedestrian tracking

Thank you for your attention.
